

Having a conversation

> $3 + ? = 8$

 >> I don't understand

> ? is a number

 >> 04.

> Try a random number

 >> $3 + 7 \neq 8$

> keep trying

....

THIS will be particularly important as its thoughts become noisier.

• How will it know ~~why~~ what the context is when the ~~the~~ user says "Try a random number" or "keep trying"?

• A: processor searches STM for most recent conversation and/or quardary.

→ Loads it back to top of w.m.
